

The purpose of the Trial testing is to demonstrate the ability of ReCorr® QCQ Test to quantitatively rate the tested samples and establish the order of their quality. The samples may be new or aged, may vary in the type of coating system, the number of layers, the total thickness etc. Samples of different coating quality will typically yield different and stable results after immersion for 200 h in 3.5% NaCl. Aged or damaged coatings may show corrosion at the substrate.

1. Follow the [Free Trial](#) link to register for a free trial.
2. Fill in the *Free Trial Application Form* and you will receive the *Registration confirmation* by e-mail.
3. Send up to three coated metallic samples to the following address: ReCorrTech, Domobranska 4, HR-10000 Zagreb, CROATIA and quote the *Registration number*.
4. The dimensions of the samples should preferably be 19 cm × 6 cm or such that they can accommodate two 4 cm × 6 cm electrodes with a margin of at least 1 cm around each electrode. If identical in appearance, the samples should be labelled so that they are easily identified. The samples may be coated on one or both sides. If only one side is intended for measurement, such as upper sample side after salt cabinet exposure, it should be designated. For other sample shapes and sizes, e.g. small coated products of irregular shape, please contact us at info@recorrtech.com
5. You will receive a confirmation of samples arrival by e-mail.
6. The Sample Test Report will be provided by e-mail, within 10 days from samples arrival.

To access *a Sample Test Report*, please follow this [link](#).
